Flexible tile is a new type of architectural decorative material made primarily from natural colored sand and modified clay (MCM). It incorporates a specific water-based polymer as a modifying agent and undergoes a multi-step process involving a custom temperature-controlled shaping system, baking, and radiation cross-linking for composite modification. Soft ceramics represent a renewable, ecologically flexible, and safe new type of eco-friendly building decoration material.

Since its inception, it initially emulates the appearance of tiles, hence the colloquial term "soft ceramics." Subsequently, with technological advancements, it has evolved to offer a variety of patterns, including stone-like, leather-like, and wood-like finishes.

Each crack is a letter from time,  
whispering tales of wind, frost, rain, and snow. Their  
rough surface holds the  
strength and tenderness of mountains  
and rivers, like clouds and dripping  
waves, light yet distant.

Its beauty lies in raw purity, not  
perfection. Slate flexible tile series:  
each gaze offers a spiritual cleanse;  
each touch is a conversation with the m  
ountains and clouds.

•Flexible Stone•

It is a dream, flowing with the breath of  
the earth.  
Touch it, feel it.  
Whether in the dappled light of dawn or  
under the soft glow of moonlight,  
it always brings a silent strength,  
allowing the soul to find a place of  
tranquility amidst the clamor.
